

CORRECTIVE AND PREVENTIVE ACTION REPORT

[DRAFT] System-generated. Requires qualified human review before regulatory use.

Study ID	ONC-2024-001	Risk Band	Critical
Protocol Version	2.1	Risk Score	87.8 / 100
Site ID	SITE-001	Total Deviations	188
PI	Noah Rhodes	Report Date	2026-09-15

Deviation Summary

Deviation Type	Count	Affected Patients	Severity Distribution
out_of_window	42	26	Major: 25; Minor: 17
missed_visit	34	21	Minor: 18; Major: 16
missing_assessment	31	20	Minor: 13; Major: 18
dosing_deviation	27	19	Minor: 11; Major: 16
eligibility_violation	27	22	Major: 27
late_data_entry	21	18	Minor: 8; Major: 13
prohibited_medication	6	6	Major: 6

Root Cause Analysis

Site SITE-001 has 188 detected deviations (risk band: Critical). Predominant deviation types: missing_assessment, dosing_deviation, prohibited_medication. Detailed root cause analysis requires qualified review. [DATA REQUIRED]

Immediate Corrective Action

Immediate actions: (1) Notify Principal Investigator of all open deviations. (2) Review all Major deviations with site staff within 5 business days. (3) Correct or document all affected CRF entries per sponsor SOPs. [Responsible party and completion date: DATA REQUIRED]

Preventive Action

Preventive actions: (1) Conduct targeted retraining on protocol requirements. (2) Implement visit scheduling reminder system. (3) Increase monitoring visit frequency. [Detailed actions require site assessment: DATA REQUIRED]

Effectiveness Check Criteria

The CAPA will be considered effective if: (1) Zero repeat deviations of the same type occur over the next 90 days. (2) Data entry lag reduces to ≤3 business days. (3) Site risk score decreases to Medium band or below. [Verification timeline: DATA REQUIRED]
