

CORRECTIVE AND PREVENTIVE ACTION REPORT

[DRAFT] System-generated. Requires qualified human review before regulatory use.

Study ID	ONC-2024-001	Risk Band	Critical
Protocol Version	2.1	Risk Score	87.8 / 100
Site ID	SITE-001	Total Deviations	188
PI	Noah Rhodes	Report Date	2026-09-15

Deviation Summary

Deviation Type	Count	Affected Patients	Severity Distribution
out_of_window	42	26	Major: 25; Minor: 17
missed_visit	34	21	Minor: 18; Major: 16
missing_assessment	31	20	Minor: 13; Major: 18
dosing_deviation	27	19	Minor: 11; Major: 16
eligibility_violation	27	22	Major: 27
late_data_entry	21	18	Minor: 8; Major: 13
prohibited_medication	6	6	Major: 6

Root Cause Analysis

Root cause analysis indicates site workflow bottlenecks, scheduling variance during active dosing cycles, and delayed electronic data capture reconciliation.

Immediate Corrective Action

1. Re-train site staff on protocol-specified visit windows and mandatory safety assessments. 2. Re-verify concomitant medication logs for active protocol compliance.

Preventive Action

1. Implement automated EHR/EDC calendar alerts 48 hours prior to scheduled visit windows. 2. Mandate dual-coordinator verification before dispensing study drug.

Effectiveness Check Criteria

Audit 100% of subject visits over the subsequent 60 days to verify zero unapproved protocol deviations and 100% assessment completion.
